

Rugged. Refined. Luxury.

Timberline

Gasoline/Diesel Fired Heat & Hot Water System
Ideal for Class B and C Motorhomes.

The Timberline system is intentionally designed to bring the luxuries of home to the rugged outdoors. Whether your adventures take you skiing in the mountains of Colorado or beach-combing in Florida, quiet comfortable heat and hot showers will welcome you back at your motorhome.

**Clean &
Efficient**

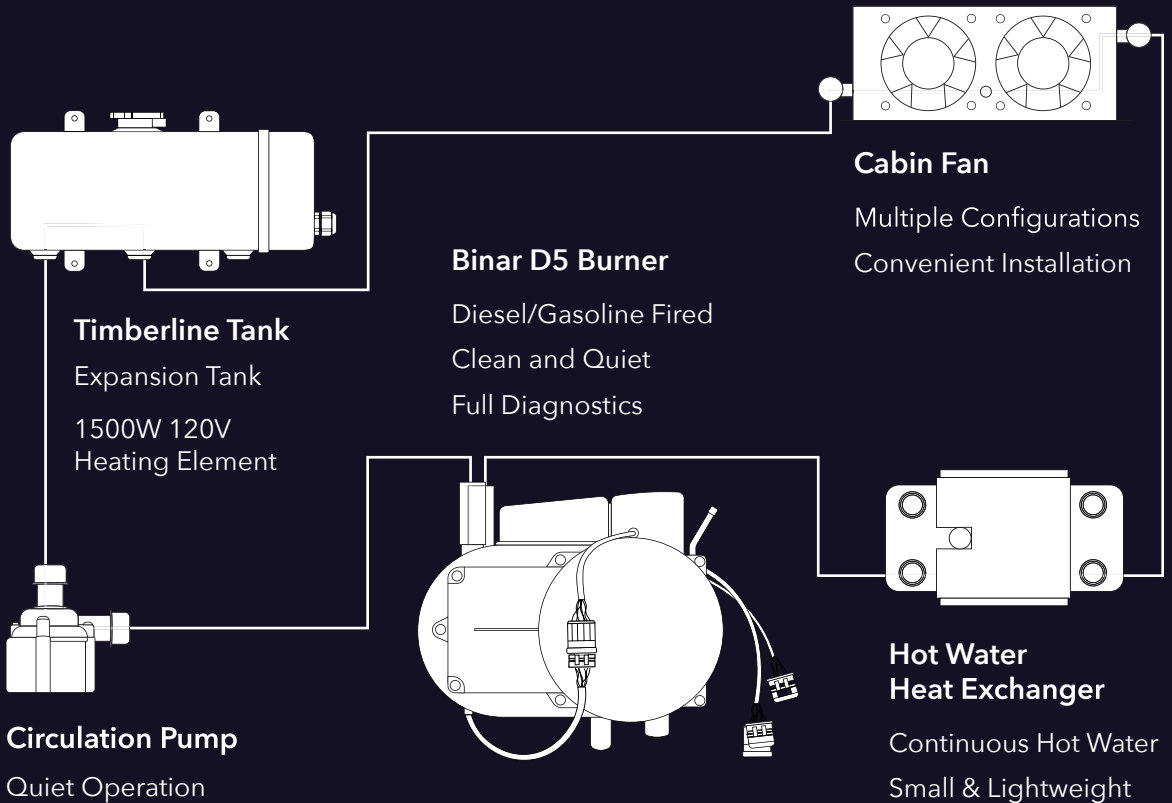

Quiet Power

Timberline heat and hot water is generated by the Binar D5 burner, a powerful but quiet diesel or gasoline heating unit made for the most adverse conditions. It heats a glycol solution which is silently circulated through the interior of the living space by quiet air handlers that provide soft radiant heat.

The glycol is also circulated through an instantaneous water heat exchanger which produces continuous hot water for showers and kitchen use. By using the diesel or gasoline burner coupled with 110V electric element support, Timberline provides efficient comfort whether dry camping or plugged into shore power.

The Timberline touchscreen digital panel located inside the RV gives you full control of your interior temperature. It's controls are intuitive and easily allow you to adjust how hard or soft you want the heat to distribute and whether you want to utilize your fuel source or electric only. When the RV is cold the fans run on high until the interior temperature starts to reach its target. The fans then automatically slow down and remain on low levels, maintaining the comfort levels inside.
