# Rugged. Refined. Luxury.

Timberline heat and hot water is generated by the Autoterm Compact 5, a powerful yet quiet diesel or gasoline heating unit made for the most adverse conditions. A heated glycol solution is circulated through the interior of the living space through quiet air handlers that provide soft, radiant heat.

The glycol is also circulated through an instantaneous water heat exchanger, which produces instant hot water for showers and kitchen use. By using the diesel or gasoline burner coupled with the 120V electric element support, Timberline provides efficient comfort whether dry camping or plugged into shore power.

The Timberline touchscreen digital panel located inside the RV gives you full control of your interior temperature. Its controls are intuitive and easily allow you to adjust how hard or soft you want the heat to distribute and whether you want to utilize your fuel source or electric only.

When the RV is cold, the fans run on high until the interior temperature starts to reach its target. The fans then automatically slow down and remain on low levels, maintaining the comfort levels inside.
